Russell Cutler, the 13-year-old son of Mr. and Mrs. W. F. Nearly Half a Billion Binder Twine Used Every Year.

The size of the world may be guessed at, according to Farm and Fireside, by the fact that it takes nearly half a billion pounds of binder twine or to be exact, 400,000,000 pounds to meet its needs each year. An enthusiast for figures could spend an interesting hour in figuring out how many times this twine would reach around the world.

"Of this immense amount more than 80 per cent is made of henequen. This fiber, which is so frequently mislabeled, is secured from the leaves of the henequen plant. Henequen grows in Yucatan and Cuba, but the first named country produces most of the supply. Henequen grows in many of the tropical countries, but more than nine tenths of it comes from Yucatan. The limestone soil and the hot, dry climate there are favorable to its growth."
